

ADP ALLOCATION METHODOLOGY:
CURRENT AND HISTORICAL PRACTICES
FY 1997-1998
ADDENDUM

**PART IV - SUBSTANCE ABUSE PREVENTION AND TREATMENT
BLOCK GRANT (SAPT)**

SAPT: Discretionary

- An additional \$7.2 million of ongoing funds were allocated to counties using \$2,500 per each million to all counties, with the balance allocated 50% per capita and 50% equity step-up methodology.

SAPT: Prevention Set-Aside

- The Prevention Set-Aside was allocated based on the same methodology as the previous fiscal year.

SAPT: SSI/DA/A

- The State's share of SSI/DA/A for FY 1997-98 was \$7.3 million (including \$365,319 for SSI/DA/A HIV Set-Aside).
- These SSI/DA/A funds were allocated to counties based on the Social Security Administration data of the total SSI DA/A recipients, by county, who were determined ineligible due to alcohol or drug addiction. This methodology, cited by congressional intent and the federal funding agency, was to ensure that these funds were targeted for treating those individuals who had lost SSI eligibility due to an alcohol or drug addiction problem. Fiscal year (FY) 1998-99 is the last year of SSI/DA/A funds.

SAPT - HIV Services Set-Aside

- The HIV Set-Aside allocation methodology (including \$365,319 SSI/DA/A HIV

Set-Aside funds and \$643,601 HIV Set-Aside ongoing increase) was the same as the previous fiscal year.

SAPT: Perinatal Set-Aside Allocated

- Allocation amounts for the Perinatal Set-Aside remained the same as

FY 1996-1997.

Note: Beginning FY 1996-97, Perinatal Pilot Projects allocations have been combined with Perinatal Set-Aside allocations.
